

Name: Ishika Choudhary

Reg No: 25BSA10019

Branch: Computer Science Engineering (Cloud Computing and Automation)

Year: 1st Year B. Tech

Course Code: CSE0001 – Digital Literacy

Date: 31st march 2026

Introduction

This project is based on the concept of digital literacy, which is an essential skill in today's technology-driven world. As a Student Digital Ambassador, the objective of this project is to understand and demonstrate the importance of using digital tools effectively, safely, and responsibly. The project consists of five tasks that cover various aspects such as creating an infographic, building a professional digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and learning about cybercrime awareness. Through this project, I gained practical knowledge about digital platforms and developed skills that will help me academically and professionally. This project also helped me understand the importance of maintaining a professional online presence and staying safe in the digital environment.

Task 1: Infographic Write-up

For this task, I created a digital literacy awareness infographic using Canva. The infographic focused on key topics such as the meaning of digital literacy, safe internet practices, useful digital tools for students, and maintaining a professional online presence. I designed the infographic to be simple, visually appealing, and easy to understand for students. Icons and bullet points were used to make the content more engaging and readable.

Through this task, I learned how to present information in a concise and creative way. One challenge I faced was selecting the right amount of content without overcrowding the design. However, it helped me understand the importance of clarity and visual communication. Overall, this task improved my design skills and made me realize how visuals can effectively spread awareness among students.

Task 2: Digital Portfolio Write-up

In this task, I created and updated my profiles on platforms such as GitHub, Stack Overflow, and Kaggle. GitHub is used to showcase coding projects and manage repositories, Stack Overflow is helpful for solving coding-related queries, and Kaggle is a platform for data science learning and practice. I also created a GitHub profile README that includes my basic details and learning goals.

These platforms are important for building a strong digital presence and improving technical skills. Over the next four years, I plan to use GitHub to upload my projects, Stack Overflow to learn from the developer community, and Kaggle to explore data science and participate in

competitions. This task helped me understand the importance of having a professional online identity and how it can support my academic and career growth.

Task 3: Platforms Write-up

For this task, I explored both coding and collaboration platforms. I created an account on HackerRank and solved a beginner-level problem, which helped me understand basic coding logic and problem-solving skills. It was a good starting point for improving my programming abilities.

In addition, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. The form included both multiple-choice and short-answer questions. I also linked it to a Google Sheet to collect responses. This activity helped me understand how online tools can be used for surveys, quizzes, and data collection.

Overall, this task helped me learn how digital platforms can support both learning and collaboration. These tools will be useful in academics for assignments, quizzes, and improving coding skills.

Task 4: Email Etiquette Write-up

This task focused on understanding professional communication through emails. I drafted two emails: one requesting an assignment deadline extension and another expressing interest in an internship opportunity. While writing these emails, I ensured that they included proper subject lines, formal greetings, clear content, and polite closing statements.

I also created a checklist of do’s and don’ts for responsible social media usage. This task helped me understand the importance of maintaining professionalism in digital communication. Poor communication can lead to misunderstandings or missed opportunities. For example, using informal language in a professional email can create a negative impression. This task improved my communication skills and taught me how to interact professionally in academic and work environments.

Task 5: Cybercrime Write-up

In this task, I studied UPI/online payment fraud, which is a common cybercrime in India. I learned how attackers trick users into sharing sensitive information or approving fraudulent transactions. What surprised me the most was how easily people can fall victim to such scams due to lack of awareness.

As a result of this task, I will be more cautious while handling online transactions and will never share my UPI PIN or OTP with anyone. I also learned about reporting cybercrimes through the National Cyber Crime Portal and helpline number 1930. This task increased my awareness about online safety and the importance of being alert while using digital platforms.

Conclusion

This project provided a comprehensive understanding of digital literacy and its importance in everyday life. Through various tasks, I learned how to use digital tools effectively, communicate professionally, and stay safe online. The project also helped me build a digital portfolio and improve

my technical and communication skills. Overall, it was a valuable learning experience that will benefit me throughout my academic journey and future career.
